

# Transport in cells — questions and answers

**1. What is diffusion?**

The spreading out of particles from an area of higher concentration to an area of lower concentration

**2. What is osmosis?**

The diffusion of water through a partially permeable membrane

**3. What is active transport?**

The movement of substances against a concentration gradient using energy from respiration

**4. Where is the energy for active transport released?**

In respiration

**5. What is a partially permeable membrane?**

A membrane that lets some molecules through but not others

**6. Which process moves mineral ions into root hair cells?**

Active transport

**7. Give one factor that increases the rate of diffusion.**

A bigger concentration gradient, higher temperature or larger surface area

**8. What happens to an animal cell placed in pure water?**

It swells and may burst
